

## Tile Nippers Instructions

### Cuts Tile & Porcelain

The 5/8" biting surface is carbide tipped to provide extra strength when cutting tile. Both of the offset jaws features a straight shape for easy biting action when nipping away at tile. A handle stop is positioned below the fulcrum to protect both the carbided tip of the jaws and the user's fingers. The 8" nippers have a 3/16" opening for standard tile. A center spring between the handles returns the jaws to an open position. Use the handles close to the end for best leverage. Green plastic handle grips provide comfort and a secure grip during use. Use this Nipper when cutting tile and porcelain materials around outlets, pipes, and odd shapes.
